New Features

Legal Application Support

The configuration tool now fully supports the creation of a Legal application with default tabs for Client, Matter, Practice Codes, and Offices.

After Hour Record and Index Processing

Application setting added whereby full text tables can be updated and index maintenance applied in off hours.

Column Freezing for Home Page Grid

The first two columns in the home page grid are set to be "sticky" – allowing the user to scroll to the right and still select the record.

Event Based Retention Schedules

List management setting added that allows users to add month/day values for event codes.

Support for Large Digital Files

Cloud customers now have an application setting added for the ability to store temporary files in an alternate folder location. Adds support for uploading larger digital content files (> 200-250MB).

Bug fixes

ID	Description
60021	Fixed import log pagination issue.
63359	Log file now uses UTC time to store event date and is displayed correctly based on location of user.

63360	Tree View now correctly displays child nodes and provides right click functionality.

Known Issues

ID	Description
65029	Export page tooltip message is incorrect.
64971	Reports cannot be run from the dashboard. Workaround is to run reports from the reports page instead of the dashboard.
65151	Advanced Query Clear Row button does not clear the selected row.
69861	Users require permissions to both Portable Transfer and Portable Reconcile to access the Utility page.
